EXIDE

EL TUBULAR

The extra POWER UPS Tubular Battery

Low Maintenance • Last 3 Times Longer
The new EL range are manufactured as per Exide’s proprietary Torr Tubular technology using one of the world’s most exclusive, advanced and state-of-the-art ‘HADI’ high pressure spine casting (at 100 bar) machines, which is not commonly available. With our hi-tech R&D center at Kolkata, Exide has developed the high-corrosion resistant and robust spine technology using the HADI process, which ensures a super fine grain structure, for strength, long life and highest reliability. It is also cadmium free.

Applications
- UPS System
- Telecommunication Systems
- Office Automation Equipment
- Fire Alarm & Security Systems
- Electronic PABX Systems
- Cable Television Equipment
- Electronic Attendance & Cash Registers
- Process Instrumentation & Control
- Railway Signalling
- Power Plants & Substations
- Cellular Phones & Pagers (Base Stations & Transmitters)
- Geophysical Equipment

Operational Settings:
For constant potential charging - Boost Voltage (max) : 2.40 Volts per cell, Float Voltage: 2.25 Volts per cell
Limit charging current (A) : 10-20% of C/10 capacity

Equalizing Charge:
An equalizing charge is a special charge given when non-uniformity in voltage/Sp. Gr. has developed between batteries. It is given to restore all batteries to a fully charged condition. Equalize charge should be done in every 6 months at the rate 3 to 4% constant current of C/10 capacity upto TOC voltage (@2.65 vpc) for 6 hours.

Statutory Notice:
All batteries contain lead, which is harmful for humans and environment. As per statutory requirements, the used battery must be returned to the authorized dealer, manufacturer or at the designated collection centres.
